

FULL STACK APPLICATION DEVELOPMENT (24SDCS02)

2025-26, Even Semester

Project Problem Statement Submission Form

Sec No- 6	Team No-	Project Title- Project Management Tool
----------------------	-----------------	---

1. Abstract

A Project Management Tool is a web-based application designed to help teams efficiently plan, organize, and manage their projects. In today's fast-paced development environments, managing tasks, deadlines, and collaboration among team members is challenging. Traditional methods like spreadsheets or manual tracking lack real-time updates and scalability.

This project aims to develop a centralized platform where users can create projects, assign tasks, set deadlines, and track progress. The system will provide features such as task prioritization, status updates, team collaboration, and notifications. Users can visualize project progress through dashboards and reports, improving decision-making and productivity.

The tool will support role-based access, allowing administrators, managers, and team members to interact with the system based on their responsibilities. Integration of modern UI/UX practices will ensure ease of use and accessibility.

Overall, this solution enhances teamwork, reduces miscommunication, and ensures timely completion of projects by providing a structured and transparent workflow system.

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number(s)	Signature
B.Guru Prasad	2420090089	
Sree Bhuvaneshwari	2420030519	
Sai Pranay	2420090108	

3. Module Details

(Explain the responsibility of each student concerning their assigned module.)

B.Guru Prasad-User Authentication Module

Handles user registration, login, logout, and role-based access control.
Ensures secure authentication and authorization.

Bhuvaneshwari-Project Management Module

Allows users to create, update, and delete projects. Assigns team members and defines project timelines.

Sai Pranay-Task Management Module

Enables task creation, assignment, prioritization, and status tracking (e.g., To-Do, In Progress, Completed).

4. Frameworks / Platforms / Software Used

- **Frontend:** HTML, CSS, JavaScript, React.js
- **Backend:** Node.js, Express.js
- **Database:** MongoDB / MySQL
- **Version Control:** Git, GitHub
- **Tools:** VS Code, Postman
- **Deployment:** Netlify / Heroku / AWS (optional)

Guide Name and Signature (remarks if any) _____
